

VEHICLE TIPS AND TRICKS

The information contained on this sheet is a guide to help put your car on, and keep it on, the Great Escape Oz track. The tips and ideas are mostly those from entrants and officials that have learnt the hard way over the years. There is a lot of information here, and you are not expected to rush out and ensure all this is done to your car. However, you will no doubt find some very helpful advice to get yourself started for this year's rally, and hopefully have a good view of basic preparations for the future Great Escape Oz rally.

COMPULSORY VEHICLE EQUIPMENT

To begin with, here is the list from the official rules. The items listed below, are everything that your car **MUST** have:

- A Speedo or tripmeter that reads to at least one tenth of a kilometre
- Fire Extinguisher. Easily accessible and firmly mounted. Must be of adequate size and tagged.
- 10 Litres of drinking water
- A Snatchem strap. (NOT a tow rope or chain)
- Mud Flaps of stout material for each driving wheel. (Mud flaps must be at least 100mm off ground when vehicle is fully loaded)
- 20 Litre legal fuel container. Must be full at the beginning of each day
- UHF radio. Fitted and in good working order
- An orange rotating light on the roof of the vehicle for use in dusty conditions. Must be unobstructed and easily visible from the front & rear
- Sleeping gear for each crew member, just in case.
- Seat belts must be fitted to the vehicle for each crew member and worn at all times. Full harness seat belts are recommended
- A securely mounted and clearly marked front and rear towing point (for recovery out of bogs etc.)
- A centrally mounted tow ball for the front of the vehicle. The tow ball should be unbolted and stored in the boot. This is for stiff bar towing should you break down.
- Rear facing car number, at least 4 inches high. Black on white or white on black. Must be on the right-hand side and easily visible
- Forward facing car number. White numbers on the passenger side of the windscreen
- A space at least 650mm x 450mm must be kept clear on each front door or an area approved by the organisers, for the official door signs
- A HEMA Australian Road Atlas
- At least a 4-point roll cage is strongly recommended, but not compulsory.
- As per State laws, an engineer's certificate (modification plate for QLD) must be obtained for any major modifications made to the vehicle e.g. seats and seat belts. For more information, contact your nearest Motor Registry office or Department of Transport
- If your vehicle does not comply with all the above equipment, IT WILL BE ENFORED THAT YOU MUST ONLY FOLLOW MAIN ROADS. (This rule will be strictly adhered to by the organisers without exception).

SCRUTINEERING AND VEHICLE REQUIREMENTS

It is the total responsibility of the principle entrant and vehicle owner to ensure that the vehicle is presented at the start of the rally in a legally road registered and road worthy state. It is also their responsibility to ensure it remains in a safe and road worthy condition throughout the event.

At Registration and Scrutineering which is before the start of the event, you must:

- Bring either a letter from an authorised mechanic stating that in their opinion the vehicle is in a road safe condition or a current Safety Certificate.
- You need to have the; Current vehicle registration papers
- > The vehicle will have all the compulsory equipment as stated in the official rules

ROLL CAGES, FUEL TANK, SEATS, SEAT BELTS, MODIFICATIONS

This is probably the most difficult part of your vehicle preparations. It can be a real hair-teaser if you approach it incorrectly. However, if you take the right steps first up, it won't be too difficult.

- Once you have your car and a basic plan what you would like to modify on it, locate yourself an engineer that is certified to approve these modifications. A list of authorised businesses in your area can be obtained through your local Motor Registry Office or Department of Transport. If you are fortunate enough to have a few of these people in your town, make sure you find one that can relate to you and your needs. Some are very understanding of the vehicles requirements and will be helpful while others couldn't give a hoot and will make your life difficult.
- Once you have found the best person to talk to, you can then proceed through to make your modifications then onto getting them approved and certified
- The Motor Registry Office or Department of Transport, or your chosen approver, can supply you with the steel and mounting specifications and drawings etc.

TOW POINTS AND TOWING:

As The Great Escape Oz is an adventure and travels into some very interesting country, it is not uncommon to come across a dry sandy creek bed or a bog-hole or two. To keep you safe and on the move, we will station a recovery vehicle in these known trouble spots.

Recovering a vehicle with a snatchem strap is quick and easy but can be dangerous if not done safely. To help keep things running smoothly and to ensure everyone's safety, we have stringent procedures that we must have and follow.

Towing Points:

When it comes to safety, the chain reaction starts here. You are required to have a safe, secure and strong towing point at the front and rear of your car. Hooks are best, but make sure they are proper towing hooks. Anything that breaks when recovering a vehicle from a bog can turn into a very dangerous flying projectile. If your towing points are Hayman Reece style tow points, rather than hooks you will need to have at least a 4.7t rated D shackle. Nothing less will do.

Centrally Mounted Tow ball:

You will notice in the rules that you require a centrally mounted tow ball on the front of your vehicle. This should be a Hayman Reece style tow point(or equivalent of) so that the Tow Ball can be removed and stowed away safely. The requirement for a Tow Ball is for the purpose of stiff towing in the event that your vehicle breaks down and you need to be towed by sweep car into town. For comfort and safety, it needs to be in the centre of your car. The Tow Ball **MUST Never** be used for snatching a car out of a bog and therefore should be removed from the tongue. Leaving it attached to the tongue on the car is unsafe and it will be too easy for someone to drop a snatch strap on there to pull you out of a bog. The 4.7t rated D shackle is to be used to hitch the snatch strap to the tongue for the purpose of snatching a vehicle out of a bog. It is important that you unbolt this ball and keep it stored elsewhere. If it is left on the car. This is not safe.

Towing Equipment:

Now that we have the right towing points, we just need to use the right equipment to make sure we are safe. Your snatchem strap should also be in new condition and be a heavy duty snatchem strap. If your strap is frayed, has been used a fair bit and is 4 or 5 years old, you have got your money's worth and it is time to buy a new one. Don't throw your old one out, keep it in your car as well.

Towing procedure:

Having the right setup and equipment doesn't automatically grant safety, it must be used correctly. We are implementing safe vehicle recovery procedures. Here is an indication as to what to expect; each car (backups and officials included) should select which crew member will be their recovery person. That person is then

responsible for handling the equipment and communicating with the towing car. Everyone else stays well clear and has nothing to do with the operation.

FUEL CAPACITY

Often people wonder just how much petrol they should be carrying and what kind of distances they should be prepared to cover.

All the refuelling points are clearly marked in the track book each day and are no further than 450 km apart. Bear in mind that a lot of refuel points are in small towns with one bowser. If you have larger carrying capacities, you can often avoid lengthy delays by not having to wait for fuel.

On some occasions we make it compulsory to purchase a minimum amount of fuel. If this is the case, it will be clearly spelt out in the track book. The reason is because remote fuel suppliers need to make special bulk orders just for us. So, we need to guarantee they will be able to sell this mount and not be stuck with it.

It states in the rules that you are required to carry a 20-litre jerry can. This is the case regardless of whether you have an extra tank or a larger capacity one. You never know when you might stone a tank or someone else might need help.

TRACK BOOK

Quite often you will hear us refer to the "Track Book". The track book is a very comprehensive book that will be given to you at registration on the first day. The track book is often referred to as the Bible. It contains EVERYTHING. Where to camp, where the food is, where the bar and entertainment is, where to start each morning, where to turn left, turn right and how far to next fuel. It will be your most treasured item on any Great Escape Oz.

NAVIGATION

One of the hardest things to buy for your chosen car is a trip meter. Not so much that they are hard to get, but for what they cost and what you get for your money. As most of us are not into competitive motor sport, trip meters are a foreign and little-known instrument, however they can make navigating around the set course a breeze.

For what they are, trip meters are quite expensive and there are not many brands on the market.

There are now a large range of GPS units on the market and they are changing regularly. Speak to others about brands before you purchase a unit.

RESPONSIBLE DRIVING AND BEHAVIOUR

Once again, it is the sole responsibility of the vehicle owner, crew and driver to ensure that all road laws are adhered to at all times. Never to the organisers encourage, endorse or condone unsafe driving or breaking the law in any way.

In the track book and at daily briefings you will be reminded about this and we will also reinforce the need to drive in a safe and sensible manner and be aware of the adverse condition that you will encounter.

Just because you are part of an event, it does not exempt you in any way from the law or your responsibilities as a common road user or citizen.

INSURANCE

It is important to note that your vehicle must be covered by at least a Third-Party Property damage insurance cover. It is usually not worth it, or most companies won't cover your car comprehensively.

Should you have difficulty in this area, please contact your preferred insurance broker/company.

TIPS, TRICKS AND BASIC ESSENTIALS:

The ideas and equipment listed below is NOT compulsory but is recommended preparation and preventative maintenance. No doubt you would have your own ideas and procedures you follow in preparation; however, these are just some basic steps to ensuring you have a trouble-free Great Escape Oz. Most of this equipment and ideas come from our sweep guys who have seen every breakdown over the past years, so they have a fair idea what can go wrong and what to carry to keep you going.

SPARE PARTS	VEHICLE CHECK	
Tyres gauge, valves, dust caps, emergency plugs and 12v	Check gearbox and diff breathers. They should be mounted up	
compressor	high with inline fuel filters attached	
Full set of fan belts & hoses	Have you replaced your ball joints?	
Throttle springs	Are you starting with healthy tyres? Tyres that are a few rallies	
	old, bruised and chipped won't last	
Fuel filters	Tie rod ends and idler arm bushes	
Metho	Are your front wheel bearings healthy?	
Wheel studs and nuts	Check brake master cylinder & callipers for leaks	
Rear cross member bolts (falcon)	Shock absorbers check for oil stains on them. Check rubbers	
	and mounts	
Upper & lower ball joints	Was your engine getting hot? Check your cooling system	
Shock absorbers	Your cars fuel range will need to be able to cover 450km of	
	steady going unassisted	
Bulbs & belts for flashing light	Crack detect your stub axles and rear axles	
Spare hose to bypass Automatic cooler if it gets damaged	Do you know/understand your car? E.g. Filters, pumps, relays,	
	switches, fuses etc.	
Spare Universal Joints	Is your tripmeter, UHF & flashing light hard wired to your	
	battery?	
Engine mount bolts	Get UHF radio checked and serviced	
Duck-tape & cable ties	Start with new wiper blades	
Front suspension bolts that are not common e.g. Commodore Z	Brake booster diaphragm	
bar nuts & washers		
Dewatering fluid – CRC, WD40	Replace brake fluid	
Spare Brake Hoses – front & rear & brake line clamp	Fit new plug and leads	
Spare bolts for bash plate	Check centre bolts in rear leaf springs	
Spare points, rotor, cap, condenser and coil	Shackle bushes	
Radiator stop leak (Ground ginger & pepper will also work as a	Woven wire dairy mesh (6mm square x 2mm thick) for in front	
last resort	of radiator or on bulbar to stop sticks and stones getting in.	
	Buy it from any hardware store	
Engine/gearbox/diff oil, brake fluid & auto transmission fluid	Check engine mounts and bolts. Chain mounts or bolt through	
Funnel and hose to get fluid/oil in	the mount	
Spare wheel bearing and seals and bearing grease – or pre-pack	Can you trust whoever did the work? Remember, cheap &	
bearings	nasty = Breakdowns	
Split pins		
Spare Water pump		
Spare fuel pump for engine and or extra fuel tank. This can be		
set up on the vehicle before you leave		
Gasket paper, sealant and scissors		
Spare bulbs for head lights, tail lights and indicators.		
U bolts & nuts		
Spare shock absorber rubbers		
Spare relay, electrical cable, terminals and toggle switch		
Dust masks and safety goggles		
Tools, and any special/unique tools for your car		

FIRST AID KIT

As it states in the rules every car must have a suitable First Aid Kit. As we travel into remote areas, it is important to have more than just a Band-Aid and a Panadol. Although we prepare ourselves we usually only think of the first aid kit in case of a vehicle accident, the first aid kit rarely gets used for this. It is more common for minor injuries and discomforts that you get when outside the car.

Your first aid kit should contain at least the following and be easily accessible to everyone in the car:

Item	Qty	Description
Medical Kit Information		
Contents Booklet/Notebook	1	What your kit contains so you know what you need to replace
Emergency Action Pad	1	Separate notebook to write down what you did and found on the scene of an accident
First Aid Booklet	1	Basic First Aid Information Booklet
Personal Protection		
Protective Gloves	2	2 pairs of each size for all persons in the car (e.g. large, ex-large, medium etc.)
CPR Face Shields	2	Or better still, a special St Johns Resus mask
Antiseptic wipes	5	Also known as Alco wipes
Bio Hazard Bags	2	Or any sterile bag for body parts (e.g. zipped bags) (e.g. cut off finger)
Essential Equipment		
Tweezers	1	Pair
Safety Pins	4	Various sizes
Scissors	1	Pair
Pen	1	
Splinter Probe	1	
Wound Treatment		
Sterile Gauze swabs	1	Packet of 5
Cotton tips	6	
Normal Saline	2	30 mls
Trauma Dressing	2	9 x 20cm
Sterile Wound Closure Strips	1	Packet of 6
Antiseptic Cream	1	Tube
Wound Cover & Bandaging		
Elastic Gauze Bandage	1	5cm x 4 metres
Elastic Gauze Bandage	1	7.5 cm x 4 metres
Crepe Bandage	1	10cm
Band Aids	1	Packet of 10
Non-Stick Dressing	1	Packet of 5, 10 x 8 cm
Eye Pads	2	
Triangular Bandage	3	
Adhesive Tape	1	Roll
Blister & Burn		
Burn Aid Cream	1	Tube
Moist Burn Pad	1	10cm x 10cm
Aloe Vera	1	Tube (for continuing treatment)
Survival		
Thermal Blanket	1	Aluminium Foil
Ice Pack	1	Packet

You may add to above list with whatever you see fit to suit your individual situations and illnesses you or your crew may have. This may include medicine for asthma, high blood pressure, medicine for constipation, headaches etc. Antihistamines, ibuprofen, Herron tablets, cold & flu tablets, Imodium.
